One of the major challenges facing the world today is the interaction between demographic change and development. Demographic Dynamics and Development reviews the dominant demographic theory, demographic transition, and then presents a thorough investigation covering aging, fertility, contraception, nuptiality, mortality and migration, which are all aspects that drive these changes. Each chapter combines the latest empirical data with theoretical reflections on the implications for development.

This book thus offers an overview of worldwide demographic data, studied with a view towards development. In doing so, it provides researchers and specialists with clear information through in-depth case studies, focusing on a country, a region or a particularly important scientific sub-theme.

How we relate to orphaned space matters. Voids, marginalia, empty spaces-from abandoned gas stations to polluted waterways-are created and maintained by politics, and often go unquestioned. In *Loving Orphaned Space*, Mrill Ingram provides a call to action to claim and to cherish these neglected spaces and make them a source of inspiration through art and/or remuneration.

Ingram advocates not only for "urban greening" and "green planning," but also for "radical caring." These efforts create awareness and understanding of ecological connectivity and environmental justice issues-from the expropriation of land from tribal nations, to how race and class issues contribute to creating orphaned space. Case studies feature artists, scientists, and community collaborations in Chicago, New York, and Fargo, ND, where grounded and practical work of a fundamentally feminist nature challenges us to build networks of connection and care. The work of environmental artists who venture into and transform these disconnected sites of infrastructure allow us to rethink how to manage the enormous amount of existing overlooked and abused space. *Loving Orphaned Space* provides new ways humans can negotiate being better citizens of Earth.

This book examines the emergence of a culture of migration through outward migration as a country-specific phenomenon and analyzes it from different perspectives, covering various aspects such as the history of a country, its migration flows, migration push factors, social, economic, and political issues, as well as individual values. In the first part, the authors present a theoretical background on migration culture formation. This is followed by an in-depth analysis of migration culture in Lithuania in the second part.

The presented case study is based on a quantitative survey study of almost 5.400 respondents. Further, the results of this case study are compared and adapted to other classical migration countries in the European Union, such as Spain or Portugal. The book, therefore, is a must-read for everybody interested in a better understanding of migration and the emergence of a culture of migration in different countries.

Discover how the migration of peoples has shaped the modern world. This beautifully-illustrated book details the movement of people and cultures around the world - from the early migrations of *Homo erectus* out of Africa 50,000 years ago to modern refugee movements and migrations. Through striking photographs, evocative illustrations, and intimate first hand accounts, *Migrations* explores famous (and infamous) movements in history, from the Middle Passage and Trail of Tears to the California Gold Rush and the Windrush generation.

While many traditional world histories focus on (mainly European) "exploration" and "discovery", *Migrations* explores the story of each continent and focuses on cultures rather than conquest. *Migrations* highlights the human story and the positives: what has survived, not just what was destroyed. With a foreword by award-winning historian, broadcaster, and filmmaker, David Olusoga OBE, *Migrations* is a history book with a fresh perspective, focusing on a topic ever more relevant in the modern world: Where did we come from? Why do people leave their homes? What brought us all together?

Millennials in America focuses on the those born between 1982-2001. Millennials in America is an invaluable source for helping people understand what the census data tells us about who we are, what we do, and where we live. Benefits of this publication include: It will fill an information gap due to the difficulty in extracting comparative data from the Census Bureau's American FactFinder dissemination system.

The Oxford Handbook of Population Ethics presents up-to-date theoretical analyses of various problems associated with the moral standing of future people and animals in current decision-making. Future people pose an especially hard problem for our current decision-making, since their number and their identities are not fixed but depend on the choices the present generation makes. Do we make the world better by creating more people with good lives? What do we owe future generations in terms of justice? How should burdens and benefits be shared across generations so that justice prevails? These questions are philosophically difficult and important, but also directly relevant to many practical decisions and policies.

Climate change policy provides an example, as the increasing global temperature will kill some people and prevent many others from ever existing. Many other policies also influence the size and make-up of future populations both directly and indirectly, for example those concerning family planning, child support, and prioritization in health-care. If we are to adequately assess these policies, we must be able to determine the value of differently sized populations.

The essays in this handbook shed light on the value of population change and the nature of our obligations to future generations. It brings together world-leading philosophers to introduce readers to some of the paradoxes of population ethics, challenge some fundamental assumptions that may be taken for granted in the debate about the value of population change, and apply these problems and assumptions to real-world decisions.

It's one of the big questions of our time: Are there too many people in the world? Or too few? Whichever way, how would we decide? Here, economist Steven E. Landsburg, acclaimed author of *The Armchair Economist* and *Can You Outsmart an Economist?*, assesses the benefits - and the drawbacks - of having a bigger global population. The *People Paradox* is based on the transcript of his fascinating 2017 IEA Hayek Memorial Lecture, in which Landsburg details how the growth in the world population has brought immense improvements to our quality of life.

He contends the planet still has plenty of room - and addresses continued calls for population control. Landsburg, professor of economics at the University of Rochester in Rochester, New York, draws on everything from modern history to everyday life (including the contents of his sock drawer!) to mount a thought-provoking, powerful - and often humorous - argument for continued population growth. With a commentary by Dr Stephen Davies, Head of Education at the Institute of Economic Affairs in London.

One of the major challenges facing the world today is the interaction between demographic changes and development. Rather than the usual view that the population itself is the main problem, *Population and Development Issues* argues that it is just one factor among many others, such as poverty, illiteracy, poor health, unemployment, the condition of women and climate change. This book analyzes the relationships between the key demographic variables (fertility, morbidity and mortality, migration, etc.) and major development issues, notably education, employment, health, gender, social and geographical inequalities and climate concerns.

Bringing together contributions from specialists across every field, it presents empirical data simply and clearly alongside theoretical reflections.

Evan Easton-Calabria's critical history of refugee self-reliance assistance brings new dimensions to refugee and international development studies. The promotion of refugee self-reliance is evident today, yet its history remains largely unexplored, with good practices and longstanding issues often missed. Through archival and contemporary evidence, this book documents a century of little-known efforts to foster refugee self-reliance, including the economic, political, and social motives driving this assistance.

With five case studies from Greece, Tanzania, Pakistan, Uganda, and Egypt, the book tracks refugee self-reliance as a malleable concept used to pursue ulterior interests. It reshapes understandings of refugee self-reliance and delivers important messages for contemporary policy making. The first chapter is available Open Access under CC-BY-NC-ND licence.

The world's population is now estimated at over 5 billion, and projections call for a continued high growth rate, predominantly in the less-developed countries. Concern over the consequences of this situation has led to numerous public policy debates, and the complex interrelationships between population and technology have become an important new topic in demographic research. The papers in this book are based on a symposium entitled aEUROOeTechnological Prospects and Population Trends aEURO arranged for the 150th National Annual Meeting of the American Association for the Advancement of Science in New York City in May 1984.

The book focuses on clarification of the impact that technological development and population change have on one another. For instance, how may population and related socioeconomic trends be conditioned by expected or foreseeable technological changes? What is the impact of population on technology in both the developed and newly industrializing areas of the world? Linking demography with developments in the major areas of agriculture, education, contraception, longevity, and health care, the distinguished contributors offer diverse yet integrated perspectives on what is fast becoming one of the major issues of our time.

The great forces of population change the balance of births, deaths and migrations have made the world what it is today. They have determined which countries are superpowers and which languish in relative obscurity, which economies top the international league tables and which are at best also-rans. The same forces that have shaped our past and present are shaping our future. Illustrating this through ten illuminating indicators, from the fertility rate in Singapore (one) to the median age in Catalonia (forty-three), Paul Morland shows how demography is both a powerful and an under-appreciated lens through which to view the global transformations that are currently underway. Tomorrow's People ranges from the countries of West Africa where the tendency towards large families is combining with falling infant mortality to create the greatest population explosion ever witnessed, to the countries of East Asia and Southern Europe where generations of low birth-rate and rising life expectancy are creating the oldest populations in history.
