v této nabídce **33.400 Kč** vč. DPH  
(tato cena platí při objednání titulu do 31.5.2019)

Encyclopedia of Cancer, Third Edition provides a comprehensive, up-to-date overview of the multiple facets of the disease, including research, treatment and societal impact. This new edition comprises 180 contributions from renowned experts who present the latest in Mechanisms, Hallmarks of Cancer, Causes of Cancer, Prevention and Control, Diagnosis and Therapy, Pathology and the Genetics of specific Cancers. Readers will find a comprehensive overview of the main areas of oncology, including etiology, mechanisms, prevention, and treatments, from basic science to clinical applications and public health, all set alongside the latest advances and hot topics that have emerged since the previous edition.

Topics of interest in the field, including genomics and epigenomics, our understanding of the causes of cancer and the approaches to preventing it (e.g., HPV vaccination, role of obesity and nutrition, molecular markers of environmental exposures), new screening techniques (e.g., low-dose CT for lung cancer) and improvements in the treatment of many cancers (e.g., breast cancer, lung adenocarcinoma) are comprehensively and authoritatively presented.
